FLIR A6750sc MWIR

Thermal imaging camera with FLIR cooled InSb detector

HIGH SENSITIVITY, CRISP THERMAL IMAGES

FLIR A6750sc incorporates a cooled FLIR Indium Antimonide (InSb) detector that operates in the 3- to 5-micron waveband. Optionally, a broadband version that operates in the 1-5 micron waveband is available. Both versions produce crisp thermal images of 640×512 . Achieving a high thermal sensitivity of <20 mK, FLIR A6700sc is able to capture the finest image details.

FAST INTEGRATION TIMES

Working in snapshot mode, the FLIR A6750sc is able to capture all pixels from a scene simultaneously in under 190µs for room temperature scenes. This is particularly important when monitoring fast moving objects where an uncooled thermal imaging camera would suffer from image blur. The camera supports image frame rates up to 4.1k frames per second when operating in windowing mode.

STANDARD VIDEO INTERFACES

Using a standard GigE Vision® interface to transmit full dynamic range digital video, and GenlCam for camera control, the FLIR A6750sc is a true "plug and play" thermal imaging camera. Additional interfaces include a BNC analog video output. The Gigabit Ethernet and analog video are simultaneously active yet independently controlled allowing greater flexibility for recording and display purposes.

CUSTOM COLD FILTERS AVAILABLE

Custom cold filtering options for specific spectral detection and measurement are available. Perfect for imaging through glass, measuring temperature of thin film plastics, laser profiling and detection, or optical gas imaging

SOFTWARE

FLIR A6750sc camera works seamlessly with FLIR ResearchIR Max software enabling intuitive viewing, recording and advanced processing of the thermal data provided by the camera. A Software Developers Kit (SDK) is optionally available.

COMPATIBLE WITH 3RD PARTY SOFTWARE

Control the A6750sc and capture data directly into MathWorks® MATLAB software for custom image analysis and enhancement.
