DESCRIPTION

The 204 series is entirely made in AISI316L stainless steel, for use in industrial and marine environments and in general where a corrosive atmosphere can cause a rapid deterioration of a standard aluminium-steel housing.

</table>

*UFW: Usable front window diameter
- L suffix refers to camera housing with L=600 mm.

CERTIFICATIONS

Weatherproof standard: IP67

INSTALLING THE CAMERA

Prior to installation and operation, read carefully all instructions the in this manual and heed all warnings.

Unpack this equipment and handle it carefully. If the package appears to be damaged, notify the shipper immediately.

Use the original packaging to transport the unit. Disconnect power supply before moving it. In case of returning the equipment, the original packaging must be used.

Make sure that the installation surface can support at least four times the weight of the unit in normal operating conditions. In case of excessive external stress (e.g. vibration, strong winds or impact), the equipment may need additional means of protection.

Proper stainless steel hardware should be carefully chosen to fasten the unit to the surfaces.

Use caution when lifting and assembling the unit. It is recommended that non-slip protective gloves be worn during installation. The unit could bear sharp edges.

Trying to manually force the wiper will result in damaging the device and will void the warranty.

To maintain the IP rating of the unit, adequate cable glands must be used. The unit must be tightly closed when operating.

For security reasons, do not install the unit in the proximity of water containers and never push objects or pour liquids into the unit. The unit can be safely used in damp environments or outdoors, as long as the connectors are properly sealed.

Video and data cables should not share the same conduit with supply voltage cables. Whenever EMC is an issue, adequately shielded cables must be used.

Open only the covers pointed out in this installation manual. Other covers should be open only by the manufacturer. Tightening/loosening the screws using automatic tools such as drill drivers may result in damaged threads.

This equipment has been designed to fit in harsh environments requiring little or no maintenance. Suggested inspection interval is 6 months, but extremely harsh environments may require more frequent inspection and maintenance checks. On each inspection check the O-ring seals and the eventual window wiper blade integrity. Replace them if necessary.

Check cables, electrical connections and mounting hardware for integrity and tightness. Replace or tighten any damaged/loose part.

Operating temperature: -20° +55° C (-4° +131° F).

Before performing any operation, turn off the power. The installation of the unit can be performed only by qualified personnel in accordance with the regulations in force. Do not connect the unit to a supply circuit unless the installation is completed.

Check carefully the supply voltage marked on the label. Incorrect Power Supply Voltage may damage the unit. Do not overload the terminal connection, as it may cause a fire or electrical shock hazard.

An all-pole mains switch with an opening distance between the contacts at least 3 mm in each pole must be incorporated in the electrical installation. The switch must be equipped with protection against the fault current towards the ground (differential) and the overcurrent (magnetothermal, maximum 15A). It must be very quickly recognizable and readily accessible. A suitable blow fuse must also be installed for protection.

For connection to the mains, use a multipolar cable having minimum 3x1,5 mm² (15 AWG). The main cable must be at least protected by an ordinary PVC sheath.

Fasten all the cables inside the housing with cables ties or other fixing means to avoid the electrical contact with surrounding parts in case that terminal blocks screw off.

Electrical connections (such as plugs and cords) must be protected from potential hazardous environmental factors (e.g. foot traffic, hitting objects).

Ensure that the unit case is properly earthed, connecting all the earth ground studs. Earth cable should be about 10mm longer than the other cables on the connector, in such way that it won't be accidentally disconnected if the cable is stretched or pulled.

When leaving the unit unused for long periods, disconnect supply cables.
1. **Open the housing**
   Unscrew the four screws on the rear flange and remove it. Be careful not to lose screws, washers and O-rings.

2. **Prepare the housing to install the camera**, sliding the upper rail away from the lower rail.

3. **Install the camera**
   Mount the camera on the internal rail using one of the ¼” screws supplied and the plastic washer. Use the included spacers to adjust its height position.
   Slide the upper rail back on the lower rail into the housing
   Feed the cables through the cable glands on the bottom and perform electrical and video connections according to the instructions in the camera installation manual and, if necessary, in points 4 and 5.
   Check the proper position of the seal in its groove on the rear flange.
   Tighten the cable glands up till an 8 Nm torque ratio.
   Close the housing tightening the six screws on the rear flange to the main body.

4. **Only on housings with heater system.**
   Perform the input and output (to the camera) voltage connections using the PCB installed inside the housing near the rear flange.

5. **Only on housings with wash wiper system [110/240VAC]**
   Connect correct supply voltage between the BLUE wire (line) and the WHITE wire (neutral).
   Connecting the BLUE wire (line) to the GREEN wire, the wiper works until the GREEN wire is disconnected, then the wiper parks itself to its initial position.
   A normally open switch, connected between the BLUE and GREEN wires, can be used for this operation.

   **Only on housings with wash wiper system [24VAC/VDC]**
   Connect correct supply voltage between the GREEN wire (line) and the GREY wire (GND).
   Connecting the GREY wire (GND) to the BLUE wire, the wiper works until the BLUE wire is disconnected, then the wiper parks itself to its initial position.
   A normally open switch, connected between the GREY and BLUE wires, can be used for this operation.

6. **Use the screws at the bottom of the housing** to fasten the housing to its proper support.

Dimensions in brackets refer to models 204 with 600 mm tube length.

Available measures for "A"

- A = 110 mm for 204-110, 204-110-L, 204SH110 and 204SH110-L
- A = 145 mm for 204-145, 204-145-L, 204SH145 and 204SH145-L
- A = 120 mm for 204WW120 and 204WW120-L
- A = 140 mm for 204WW140 and 204WW140-L

A = 70 mm for 204IR70 and 204IR70-L (germanium window)
A = 110 mm for 204IR110 and 204IR110-L (germanium window)
A = 145 mm for 204IR145 and 204IR145-L (germanium window)

Dimensions in millimetres – Tolerances according QMS – Design and product specifications subject to change without notice.

Preserve this manual as a reference for future needs.
